

# Water, stormwater, sewer, hydro

Water Service Connection (SCRD (604) 885-6800) - The SCR D's Infrastructure Department must be consulted if a new water service is needed.

Engineering Approval Applications for storm and/or sanitary sewer connections are obtained from the Engineering Department. At the time of application, you should confirm that the connection inverts are low enough to accommodate the following:

- the foundation drain system for connection to the storm sewer; and
- the building drain invert for connection to the sanitary sewer.

If the subsurface drainage system is installed at an elevation where pumping is necessary, please refer to the information bulletin on the "Storm Sump Pump".

Temporary Power Pole Permit (Electrical Safety Inspector - (604) 885-5616) - A permit to install a temporary power pole must be obtained from the Electrical Inspection Division. The power pole location must be confirmed with B.C. Hydro as soon as possible. A temporary electrical service may be installed for construction purposes after a permit has been issued. Once the service pole and panel have been inspected and approved by an electrical inspector, the inspector will notify B.C. Hydro that it is safe to be connected.

Temporary Hydro Connection (BC Hydro -(604) 885-2211/ Electrical Safety Inspector - (604-885-5616) - Electrical connection to a building may be obtained prior to completion of construction.
