1. OVERVIEW

The District of Sechelt (the “District”) is requesting Proposals for the supply, delivery, and install of two modular storage units for chemicals at the Water Resource Centre (WRC) in Sechelt, BC.

The District of Sechelt is located on the west coast of British Columbia (“BC”) approximately 30 kilometres (“km”) north of Vancouver. The region, known as the Sunshine Coast, includes approximately 3900 square km on the Sechelt Peninsula surrounded by the waters of the Strait of Georgia, Howe Sound, and Sechelt Inlet. The Sunshine Coast does not have an overland route to the BC mainland and is dependent on the BC Ferry Corporation for the movement of vehicles or by barge for other items. A passenger ferry service runs between Horseshoe Bay and Langdale in the south and a smaller passenger service between Earl’s Cove and Saltery Bay in the north.

The modular storage units (2) would be situated at 5678 Surf Circle, Sechelt (the site of the current Water Resource Centre) and located outside the building.

The modular chemical storage buildings (2) was borne out of the necessity to provide a suitable chemical storage facility at the Water Resource Centre (WRC). The chemical supplies belong to the District of Sechelt and are currently stored in the workshop within the Water Resource Centre. The need for a separated chemical storage facility was identified in a WorkSafe BC inspection conducted on October 31st, 2016. The WorkSafe BC report stated that the storing of bulk chemicals in the workshop is unacceptable from an Occupational Health and Safety code perspective. The District of Sechelt is looking for a chemical storage modular building (2) adjacent to the WRC facility, removing all chemical storage from the workshop area within the WRC.

This Request for Proposal (“RFP”) is being issued electronically through BC Bid (www.bcbid.gov.bc.ca), CivicInfo BC (www.civicinfo.bc.ca) and the District’s website (www.sechelt.ca).

Intended Term of Agreement

Successful Proponents will enter an Agreement with the District for two (2) modular chemical storage buildings.

2. SCOPE OF WORK & SPECIFICATIONS

Scope of work: The scope of work under this RFP includes:

- The supply and delivery of two chemical storage modular units.
- **OPTIONAL:** Installation (placement) and anchoring of the modular chemical storage units to the existing concrete slab.
- Seismic anchoring of the modular units is required to the existing 9.5" thick concrete slab in front of the Water Resource Centre loading bay.
- The chemical storage building shall be sized to accommodate the chemical storage needs of the Water Resource Center approximately 16' L x 10' W x 8' T. Consideration is required for the safe storage/compatibility of all chemicals as outlined in the chemical Safety Data Sheets. The District estimates a storage capacity of 12 totes (65" high x 48" wide x 48" deep). The District is proposing two modular units for the storage of the chemicals housing 6 totes in each modular unit.

Chemical	Container Type	Weekly Consumption	Bulk Storage Requirement	Comments
Sodium Hydroxide (50%)	Tote	1 per week	2 totes in storage	
Sodium Hypochlorite (12%)	Tote	1 or 2 per month	1 tote in storage	Isolate from acids. Mixture with acids can form toxic Cl gas
Aluminum Sulfate (48%)	Tote	1 per week	2 totes in storage	
Citric Acid (50%)	Tote	1 every 2/3 months	1 tote in storage	
Sulfuric Acid (93%)	Tote	1 per year	0	
Phosphoric Acid (75%)	Pail	n/a	4 pails in Storage	
Cationic Liquid Polymer	Tote	n/a	0	
Total			6 X 375gal totes = 1650 gal = 6250 L 4 x 55 gal pails = 220gal = 835L	

- The design shall include preventing and mitigating environmental spills of chemicals as well as safety of the operators. This shall include spill containment under all areas related to the chemical storage. The existing WRC environmental administrative controls, including spill response procedures will be applied to the new chemical storage facility.

- Heating will be required as specified by the chemicals being stored as outlined in the chemical Safety Data Sheets and 15 degrees Celsius is the critical temperature set point required for storing 50% caustic.
- The modular units shall be designed for the storage of materials (BC Building Code including Division B Appendix C “Climatic and Seismic Information for Building Design” for Sechelt) and District of Sechelt Building Bylaw No.409, 2003.
- Ease of operation for loading and unloading of chemical totes by forklift into storage bays; storage bays to be equipped with roll up doors. Ensure the roll up doors provide sufficient clearances to allow the totes to be inserted and removed from the unit safely.
- If required the units shall be Designed by Structural Engineer, and/or Geotechnical Engineer as required by the District of Sechelt Building Bylaw No. 409, 2003, The Professional Governance Act of BC.
- Due to the high corrosivity of the chemicals, the structure and building components shall be compatible.
- The power source for the modular units will be run from the WRC building and will be completed by the District’s electrician.
- Conduct all necessary calculations, and other investigative work required to verify and complete the design.
- The District of Sechelt will apply for a building permit if required (areas greater than 10m²). The supplier will provide the required drawings for permit application.
- The supplier shall provide an option to provide a structural drawing package complete with sealed design by a Structural Engineer and Letters of Assurance
- The modular storage units shall be located on the North Elevation of the WRC placed in the loading area as shown below.
